A
Protein abundance at baseline and fiber hypertrophy correlations
IGKV2−30
IGHM
SERPINA1
PRKAA2
RPL28
RPL23A
RPL15
−log10 p−value
r
B
GO:BP terms of baseline protein abundance correlated with fiber hypertrophy
translation
intermediate filament organization
glycolytic process
regulation of epithelial cell apoptotic process
pyruvate metabolic process
polyol metabolic process
regulation of macroautophagy
post−transcriptional regulation of gene expression
cell surface receptor signaling pathway
cell adhesion
lipid storage
negative regulation of peptidase activity
NES
−log10 p−value
C
r = 0.341
p = 0.023
Change in fiber CSA
Abundance of translation proteins
Fiber type
Type I
Type II
Sex
Female
Male
D
Proteins involved in translation
Male type II
Female type II
Male type I
Female type I
