

A**B**

Supplementary fig. 1 | Fiber type distribution in males and females before (pre) and after (post) 8 weeks of resistance training. **A** Fiber type distribution of single muscle fibers in males (n=12) and females (n=12). **B** Area proportion of muscle fiber cross-sections in males (n=12) and females (n=12). Box plots display the median and first and third quartile, with the whiskers extending towards the largest/smallest values. Statistical analysis was performed using a two-sided linear mixed model.
