

A**B**

Supplementary fig. 2 | Maximal oxygen uptake (VO₂max) in males and females during a bike ergometer test to exhaustion. **A** VO₂max normalized to bodyweight in males (n=12) and females (n=12). **B** VO₂max normalized to lean mass (lbm) in males (n=12) and females (n=12). Box plots display the median and first and third quartile, with the whiskers extending towards the largest/smallest values. Statistical analysis was performed using a two-sided linear mixed model.
